pattern diamond technology

# FASTER CLEANER DRILLING

# ZENESIS™ DRY CORE BITS

Our 3rd generation **ZENESIS™ Dry Core Bit** is designed with the same advanced diamond technology that makes our bridge saw blades the best you can buy. This allows you to drill through granite, engineered stone, and quartzite with ease.

**Laser-welded segments, enlarged cooling holes,** and generous side coating result in **faster cleaner drilling** without even breaking a sweat. The **ZENESIS™ Dry Core Bit** is manufactured with our **most advanced pattern diamond technology** to date, and is designed to outperform and outlast its fiercest competitors.

- Laser welded segments for the strongest bond to core
- Additional undercut segments for preventing side wear of segments
- Larger cooling holes on the barrel for minimizing overheating
- Abrasive side coating on the outside of core for preventing binding in the hole
- Abrasive side coating on the inside of core making it easy to remove the plug
- Designed for granite, engineered stone, and quartzite
- Fast drilling both dry and wet
- **Scan the QR code to see how fast it drills in Taj Mahal**
